EMEA

Education

Bsc Finance and Business

2010 - 2013 | Sussex University

Ethereum Bootcamp

2022 - 2023 | Alchemy University

Projects

- **generatenfts.xyz**

Custom application built from the ground up allowing users to upload images/gifs, add metadata, and generate NFTs from a contract storing the info in IPFS. Currently deployed in Polygon but integration with Arbitrum and Optimism is planned for the near future.

- **jaymgonzalez.com/projects**

Collection of web2 projects. From Instagram like apps to memory games, lookup apps, etc.

Key skills

- Solidity
- TypeScript
- Ethers.js
- NodeJS
- AWS
- Mocha
- Docker
- Hardhat
- Git
- React
- EVM
- Vue
- Python
- Linux

Languages

- Spanish (Mother tongue)
- English (Proficient user)
- Italian (Independent user)

Soft skills

- Adaptability
- Empathy
- Communication
- Cooperation
- Presentation skills
- Friendliness
- Confidence
- Self-motivation
- Professionalism
- Learning capacity

Jay M Gonzalez

Blockchain Engineer

Professional profile

Dedicated and experienced Blockchain Engineer with over 5 years of experience in Front, Back and Infrastructure roles, I possess a strong skill set that includes proficiency in technologies such as Typescript, Solidity, Hardhat, React, Vue, AWS, Git and Python. I am also well-versed in DevOps related software like Jenkins, CI/CD pipelines and Docker. With excellent communication skills and a user/client-oriented mindset, I am seeking an opportunity in the Web3 space where I can utilize my skills and contribute to an innovative field with significant potential for impact.

Experience

Full Stack Engineer | Freelance Jan 2022 - Apr 2022

- Designing and implementing web application architecture using technologies with Vue and NodeJS.
- Managing and optimizing Firebase database.
- Collaborating with teams to deliver end-to-end solutions.
- Managing cloud infrastructure in Google Cloud.
- Troubleshooting and debugging issues as they arise.

DevOps Engineer| Medallia | Aug 2020 - Oct 2022

- Participate in a cloud providers migration. From AWS to OCI.
- Update CI/CD pipelines, Terraform and Ansible code to work with the new provider while keeping the lights on.
- Be part of the monitoring rota and troubleshoot issues in real time to avoid customer downtime.
- Responsible for the account provisioning of new clients.
- Help developers troubleshoot issues on releases.
- Deploy apps in AWS with Docker and provide support for it.
- Use Terraform to get the infrastructure deployed.
- Create Jenkins jobs to automate the whole process.
- Use GitLab for version control and Jira for agile development.

Front End Solutions Engineer | Decibel | Nov 2019 - Sept 2021

- Provide technical implementations and bespoke configuration support to multiple accounts concurrently.
- Translate customer pain points into solutions.
- Interface directly with client's technical teams to integrate with client websites and software like AWS.
- Develop strong working relations with client's technical staff
- Create technical documentation for clients
- Training client staff on how to best utilize the software.

Front End Analytics | Bupa | Sept 2018 - Oct 2019

- Lead the planning and execution of new implementations.
- Manage Adobe Analytics and Tealium implementations.
- Responsible for marketing campaigns tag implementations.
- Develop AB test in HTML/CSS/JS
- QA, debugging and troubleshooting of implementations
